EDUCATION

B.Sc Mathematics and Computer Science, JKUAT
Sep 2019 – Jun 2024

CERTIFICATES

FullStack Open 2022 
University of Helsinki

TypeScript 
University of Helsinki

Docker and Containerization 
University of Helsinki

Responsive Web Design 
FreeCodeCamp

Github Copilot 
Microsoft

AWS AI Practitioner Challenge 
Udacity

SKILLS

Soft Skills

Problem-Solving | Team Collaboration | Adaptability
| Self Driven | Attention to detail | Time Management

Programming Languages

JavaScript | Python | TypeScript | Go

Frontend Development

React | Angular | Vue | Next.js | HTML | CSS | Tailwind
CSS | Material UI | Bootstrap | Tanstack Query | Redux
| Shadcn UI | Framer Motion | Zustand | Jest

Backend Development

Node.js | Express | Flask

Databases

PostgreSQL | SQLite | MongoDB | SQL | ORM tools
(SQLAlchemy, Drizzle) | MySQL

Tools & Technologies

Git | Docker | Supabase | Firebase | Redis | Figma |
Axios | React Native | LangChain.js

PROFILE

Software Developer seeking a role where I can apply my proven ability to build scalable applications and integrate cutting-edge technologies to drive business efficiency and enhance user experiences.

PROFESSIONAL EXPERIENCE

E & M Technology House, Software Developer

Feb 2025 – Jan 2026

- Helped **advance a greenfield internet banking platform** from proof-of-concept to a production-ready system built to replace a commercial bank's existing platform, building both the client-facing and admin-side frontends.
- Closed a design gap** on the admin platform by working directly with stakeholders and the team to define UI/UX from scratch, the resulting **patterns became the template adopted** across other admin modules, extending the impact beyond the original scope.
- Participated in client demos** to validate the product against the bank's actual requirements and organizational structure, helping keep development aligned with business needs rather than assumptions.

Stackademic/JavaScript In plain English Blogs, Contributing Writer

2023 – present | Remote

- Authored 11 technical articles** across Stackademic (7), JavaScript In Plain English (2), and a personal blog (2), focused on **frontend engineering**, React fundamentals and hooks, state management (Zustand, TanStack Query), UI libraries (Shadcn/UI), and **core JavaScript concepts**, reaching **600+ reads on Medium** and building a **following of 2,000+ on dev.to** .

PROJECTS

HuntMaster 

Technologies: **React, Vite, JavaScript, Manifest v3, LangChain.js**

- Drawing from my own job search struggles, I built a smart **browser extension** that lets you **capture job postings** instantly from LinkedIn and other platforms, coupled with **AI-powered skill extraction** from job descriptions.
- Track every application through clear statuses**, view real-time progress statistics on a clean dashboard, and manage everything through an intuitive side panel.
- I also published it on the **Microsoft Edge Add-ons store**.

BookVerse 

Technologies: **TypeScript, React, Node, Express, Tailwind, Gemini API, Firebase Auth, Drizzle ORM, Postgres, Framer Motion, LangChain.js**

- As an avid reader and developer, I wanted a **smarter way to track my reading journey and discover new books**. So, I built BookVerse, a reading companion web app featuring **AI-powered book insights and customizable reading lists** to enhance user engagement and accessibility.
- I integrated Google Books API and consumet-api to provide rich book metadata and instant download links, improving searchability and content access.
- Implemented a per-book **AI chatbot using Google GenAI SDK** and Server-Sent Events (SSE) for real-time, streamed conversation support.
