EDUCATION

B.Sc Mathematics and Computer Science,
JKUAT
Sep 2019 – Jun 2024

CERTIFICATES

FullStack Open 2022
University of Helsinki

TypeScript
University of Helsinki

Docker and Containerization
University of Helsinki

Responsive Web Design
FreeCodeCamp

Github Copilot
Microsoft

AWS AI Practitioner Challenge
Udacity

SKILLS

Soft Skills
Problem-Solving | Team Collaboration | Adaptability | Self Driven | Attention to detail | Time Management

Programming Languages
JavaScript | Python | TypeScript | Go

Frontend Development
React | Angular | Vue | Next.js | HTML | CSS | Tailwind CSS | Material UI | Bootstrap | Tanstack Query | Redux | Shadcn UI | Framer Motion | Zustand | Jest | Cypress

Backend Development
Node.js | Express | Flask | GraphQL | gRPC

Databases
PostgreSQL | SQLite | MongoDB | SQL | ORM tools (SQLAlchemy, Drizzle) | MySQL

Tools & Technologies
Git | Docker | Supabase | Firebase | Redis | Figma | Axios | LangChain.js

PROFILE

Software Engineer seeking a role where I can apply my proven ability to build scalable applications and integrate cutting-edge technologies to drive business efficiency and enhance user experiences.

PROFESSIONAL EXPERIENCE

E & M Technology House, Software Developer
Feb 2025 – Jun 2026

- Helped **advance a greenfield internet banking platform** from proof-of-concept to a production-ready system built to replace a commercial bank's existing platform, **building both the client-facing and admin-side frontends using TypeScript and Next.js**.
- **Closed a design gap** on the admin platform by working directly with stakeholders and the team to define UI/UX from scratch; the resulting **patterns became the template adopted** across other admin modules, extending the impact beyond the original scope.
- **Participated in client demos** to validate the product against the bank's actual requirements and organizational structure, helping keep development aligned with business needs rather than assumptions.
- Performed **functional and regression testing** of application features, identifying defects and verifying fixes across development cycles.

Gan Technologies, Frontend Developer
Feb 2024 – Oct 2024

- Developed and maintained responsive web applications using **React, TypeScript, and Tailwind CSS**, delivering clean, scalable, and user-friendly interfaces aligned with modern UI/UX standards.
- **Monitored application performance** and **implemented optimizations** to improve speed, usability, and reliability.
- Built reusable and modular components, integrated RESTful APIs, and optimized application performance through efficient state management and code-splitting techniques to enhance load times and user experience.

Stackademic/JavaScript In plain English Blogs, Contributing Writer
2023 – present | Remote

- **Authored 11 technical articles** across Stackademic (7), JavaScript In Plain English (2), and a personal blog (2), focused on **frontend engineering,** React fundamentals and hooks, state management (Zustand, TanStack Query), UI libraries (Shadcn/UI), and **core JavaScript concepts,** reaching **600+ reads on Medium** and building a **following of 2,000+ on dev.to** .

PROJECTS

HuntMaster
Technologies: **React, Vite, JavaScript, Manifest v3, LangChain.js**

- Drawing from my own job search struggles, I built a smart **browser extension** that lets you **capture job postings** instantly from LinkedIn and other platforms, coupled with **AI-powered skill extraction** from job descriptions.
- **Track every application through clear statuses**, view real-time progress statistics on a clean dashboard, and manage everything through an intuitive side panel.
- I also published it on the **Microsoft Edge Add-ons store**.
